

Donny Rizki Pratama Santosa

AI Engineer / Data Scientist

Bandung, Indonesia | [Linkedin](#) | [Github](#) | [Portofolio](#) | donny.santosa01@gmail.com

RINGKASAN

AI Engineer / Data Scientist yang fokus membangun end-to-end AI/Data products lintas fintech, healthcare, supply chain, retail/e-commerce, B2B SaaS, dan market intelligence. Terbiasa menggunakan Python, SQL, machine learning, LLM workflows, FastAPI, dashboards/consoles, evaluation, monitoring, audit logging, dan Google Cloud deployment architecture.

KEAHLIAN UTAMA

Data / ML: Python, SQL, Pandas, NumPy, scikit-learn, XGBoost, LightGBM, forecasting, classification, clustering, recommendation system, feature engineering, model evaluation.

AI Engineering: LLM, RAG, prompt engineering, structured output, function calling, human-in-the-loop, realtime AI, transcript workflow, evaluasi output AI.

Backend / Cloud: FastAPI, Django, React, TypeScript, PostgreSQL, Docker, BigQuery, Cloud Run, Cloud Storage, MLflow, GitHub Actions, API contract, deployment architecture.

Analytics & Governance: EDA, dashboard, business insight, ROC-AUC, precision, recall, F1, WAPE, sMAPE, Hit Rate@K, NDCG@K, monitoring, audit logging, decision traceability.

STERADIAN - END-TO-END AI & DATA PRODUCT PORTFOLIO

Completed end-to-end AI/Data products built under Steradian, mencakup machine learning, LLM workflows, API services, dashboards/consoles, evaluation, monitoring, dan cloud deployment architecture. Portfolio publik berisi case study non-confidential, architecture diagram, API contract, evaluation summary, dashboard/console preview, monitoring flow, audit logging flow, dan deployment notes, source code berada di private/company repository.

Coverage produk: fintech credit risk, healthcare claim coding, supply chain demand planning, retail recommendation, B2B meeting intelligence, dan commodity pricing intelligence.

Credit Scoring System | Fintech / Risiko Kredit (Feb 2026 – Mei 2026)

- Membangun produk penilaian risiko kredit untuk membantu keputusan nasabah: approve, review analis, atau decline.
- Mengimplementasikan LightGBM, SMOTENC, leakage check, probability calibration, dan reason code, model evaluation mencatat ROC-AUC 0.9991, PR-AUC 0.9918, F1 0.9741, precision 0.9691, dan recall 0.9792.
- Menyediakan FastAPI service, decision log, audit trail, dan monitoring workflow untuk menelusuri input nasabah, skor risiko, threshold policy, dan rekomendasi akhir.
- Menyiapkan evaluation report dan API contract agar sistem bisa dibaca oleh reviewer teknis tanpa bergantung pada klaim bisnis yang tidak terverifikasi.

Stack: Python, SQL, LightGBM, SMOTENC, FastAPI

Artifacts: public case study, model evaluation summary, API contract, audit flow, architecture diagram, monitoring design

Demand Forecasting System | Supply Chain / Demand Planning (Okt 2025 – Jan 2026)

- Membangun produk forecast permintaan SKU untuk membantu planner menentukan reorder point, safety stock, dan risiko stok kosong.
- Menggunakan XGBoost, Croston SBA, rolling-origin backtesting, ADI/CV2 segmentation, WAPE, sMAPE, bias, dan demand classification untuk SKU stabil, sporadis, dan lumpy.
- Menyediakan workflow rekomendasi restock, evaluation report, monitoring perubahan demand, dan cloud deployment architecture untuk kebutuhan supply chain.
- Menjaga konteks bisnis tetap jelas melalui output planner-friendly: forecast, rekomendasi reorder, risiko stok kosong, dan catatan bias per kelompok SKU.

Stack: Python, Pandas, XGBoost, Croston SBA, MLflow, BigQuery design

Artifacts: public case study, forecasting workflow, evaluation summary, architecture diagram, monitoring plan

Customer Segmentation & Recommendation | Retail / E-commerce (Jun 2025 – Sep 2025)

- Membangun produk segmentasi pelanggan untuk membaca pola belanja, nilai pelanggan, dan target campaign retail/e-commerce.

- Menggunakan RFM, KMeans clustering, cosine similarity, Hit Rate@K, NDCG@K, dan recommendation evaluation agar rekomendasi produk lebih relevan per segmen.
- Menyediakan API rekomendasi, dashboard segmentasi, campaign activation workflow, dan monitoring perubahan segmen pelanggan.
- Menghubungkan hasil model dengan kebutuhan marketing: pemilihan segmen, rekomendasi produk, evaluasi campaign, dan pembacaan perilaku pelanggan.

Stack: Python, SQL, Pandas, RFM, KMeans, cosine similarity

Artifacts: public case study, API contract, dashboard/console preview, recommendation evaluation summary

BPJS Claim Assistant | Healthcare / BPJS Claim *(Feb 2025 – Mei 2025)*

- Membangun asisten AI untuk membantu coder klaim BPJS membaca transkrip/berkas pasien dan menyusun rekomendasi kode ICD-10/ICD-9-CM.
- Menggunakan Gemini API dan Google Cloud Speech-to-Text untuk transcript workflow, structured JSON output, confidence, alasan rekomendasi, validasi INA-CBG, dan human review.
- Menyediakan API schema, audit trail coder, validasi master data, riwayat koreksi manual, dan governance flow agar keputusan klaim dapat ditelusuri.

Stack: Gemini API, Google Cloud Speech-to-Text, ICD-10, ICD-9-CM, INA-CBG, structured output

Artifacts: public case study, API contract, audit logging flow, architecture diagram, structured output schema

B2B Meeting Assistant | B2B SaaS / Meeting Intelligence *(Okt 2024 – Jan 2025)*

- Membangun asisten rapat realtime untuk membantu tim sales/CS menangkap poin penting, pertanyaan klien, keputusan rapat, dan tindak lanjut.
- Menggunakan GPT-5 API dan GPT Realtime untuk transcript workflow, quality gate, structured meeting artifacts, CRM note, follow-up email, dan action item.
- Menyediakan desktop/web console, user-triggered actions, API workflow, monitoring kualitas transkrip, dan deployment architecture untuk meeting intelligence.
- Mengarahkan output AI ke artefak kerja sales/CS yang konkret: ringkasan rapat, keputusan klien, tindak lanjut, dan catatan CRM.

Stack: GPT-5 API, GPT Realtime, Electron, React, TypeScript

Artifacts: public case study, realtime transcript workflow, API contract, dashboard/console preview

Aluminium Market Signal | Commodity / Pricing Intelligence *(Jun 2024 – Sep 2024)*

- Membangun produk market intelligence aluminium untuk membantu tim pricing/purchasing membaca perubahan harga, berita, dan sinyal pasar komoditas.
- Menggunakan time-series features, sentiment LLM, volatility signal, quote decision log, dan monitoring pasar agar keputusan harga lebih mudah ditelusuri.
- Menyediakan dashboard/console, feature design, BigQuery architecture, API workflow, dan governance log untuk mendukung keputusan pricing.
- Memosisikan produk sebagai decision support untuk pricing/purchasing, bukan klaim prediksi harga pasti, sehingga framing tetap kuat namun tidak berlebihan.

Stack: Python, time-series features, sentiment LLM, BigQuery design

Artifacts: public case study, dashboard/console preview, quote decision log schema, feature design, deployment notes

PENDIDIKAN

Water Resource Engineering & Design - Institut Teknologi Bandung, 2019-2023

PORTFOLIO ARTIFACTS

- Portfolio publik menjadi pusat rujukan non-code untuk project: case study, architecture diagram, API contract, evaluation summary, dashboard/console preview, monitoring flow, audit logging flow, dan deployment notes.
- Source code berada di private/company repository dan dapat dijelaskan saat technical interview sesuai batas confidentiality, GitHub pribadi berfungsi sebagai profil teknis dan sample public work.
